

Swenor Rollerski Recommendations:

Skate Skis:

SWENOR SKATE ALUMINIUM LONG: ~~\$329.99~~ **MSRP** (less with team/club discounts)

The #1 recommended skate rollerski is the long-shaft aluminum version. Aluminum skis are the lightest rollerski option out there and are unrivaled when it comes to durability and reliability. The LONG version is recommended because the longer wheelbase gives a more realistic balance point and better stability. Overall, a more realistic snow-ski feel at a great price. Fenders included. Comes in yellow or pink. Mounted bindings: add \$90.00

SWENOR SKATE ALUMINIUM: ~~\$314.99~~ **MSRP** (less with team/club discounts)

I recommend the short version of the aluminum skis to skiers under 18 years old. The short version is one of the lightest options from Swenor and are easier to manage for younger skiers. Fenders included. It comes in yellow or pink. Mounted bindings: add \$90.00

SKATE ELITE: ~~\$475.00~~ **MSRP** (less with team/club discounts)

A fiberglass cap skate rollerski made of fiberglass and wood. Better vibration absorption than aluminum skis makes the ride buttery-smooth. I recommend these only to experienced roller skiers as they are heavier than the aluminum skis. Fenders included. Mounted bindings: add \$90.00

SWENOR CLASSIC SKIS

FIBREGLASS CAP CLASSIC: ~~\$475.00~~ **MSRP** (less with team/club discounts)

For classic rollerskis, I recommend the fiberglass cap skis over the aluminum option. The smooth ride, very realistic feel with some flex as you weight the ski, and small price difference make this option very worth it over the aluminum ski. Made of fiberglass and wood - just like a snow-ski. Fenders included. Mounted bindings: add \$90.00

ALUTECH CLASSIC: ~~\$396.00~~ **MSRP** (less with team/club discounts)

Lightweight, reliable classic rollerski made of aluminum. Great as the first pair of classic rollerskis or for those looking for a ski that will last. Comes in Yellow or Pink. Fenders included. Mounted bindings: add \$90.00

Poles for rollerskiing:

It's important to have strong poles for rollerskiing, but not everyone can afford to use their race poles on the roads. Here are some affordable options that meet the strength requirements of rollerskiing. I recommend upgrading the tips to purpose-built rollerski tips (below):

Rex R2 Poles ~~\$219.00~~ **MSRP** (less with team/club discounts)

A second-tier racing pole with 100% high modulus carbon shafts. Enough stiffness for all users even in longer lengths.

Rex R3 Poles ~~\$199.00~~ **MSRP** (less with team/club discounts)

A third-tier light-weight racing pole. Good value. 100% HS carbon gives enough stiffness for all users in classic or skate.

Swenor Rollerski Bag: ~~\$35.00~~ **MSRP** (less with team/club discounts)

Get a rollerski bag to match your skis! Keep your rollerskis organized and your hands free when loading and unloading the car. Fits 1-2 pairs of rollerskis.

Swenor High-Visibility Vest: ~~\$60.00~~ **MSRP** (less with team/club discounts)

A reflective vest so everyone can see that you're rollerskiing. (Or biking – whatever the case may be.) Very lightweight - great for training in the summer heat. Comes in sizes XXS to XXXL.

Swenor Drink Belt: ~~\$54.00~~ **MSRP** (less with team/club discounts)

A 1L insulated drink belt. Large pocket on top for keys and snacks. Stay hydrated!

Swenor Rollerski Gloves: ~~\$70.00~~ **MSRP** (less with team/club discounts)

Lightweight rollerski gloves perfect for training in the summer heat. If you struggle with blisters, these gloves could be your solution. Leather palms and breathable back-layer. Comes in sizes 5 to 12.

Rollerski tips (aka ferrules): ~~\$30.00~~ **MSRP** (less with team/club discounts)

Tungsten carbide tips stay sharp even after many kilometers of pounding the pavement. Apply and remove with a heat gun and glue. Comes in sizes 8mm to 11mm in 0.5mm increments. Bulk tips in 8.5mm or 10mm also available for \$16 or less per pair.
